Monica Marshall, 81 Terrace Street, Keene, NH

o5-27-20 SETTING: The unique residential property is located adjacent to our community's stunning Robin Hood Park, 130 acres of forested hillside. And speaking of hillsides, our discussion on Sunday, May 17, focused on the west, hillside slope of your home's landscape along Terrace Street. Hillsides such as this exist within the park as a mixed hardwood-conifer forest of Red Oak, White Pine and Eastern Hemlock.

EXISTING CONDITIONS:

At the north corner of the property's west hillside alongside the driveway is a low, block wall/terraced planting area which encloses the west side of the entry steps. It is currently planted with a mix of perennials and annuals. Below this entry planting are several thriving Moss Phlox plants that were blooming in their full glory when we met. The rest of the area moving south is an open, steep slope from an approx. 6' flat strip along the home's west foundation down to a shallow roadway swale. The entire area is covered in a filter fabric/weed mat to reduce weeds and assist in keeping the soil in place through seasonal weather events involving rain

or snow. The area also has a layer of shredded bark mulch. There are several individual shrubs through the rest of this area along the slope. The client would like for the area to be low maintenance due to the severity of the slope. As well they would like for the area to have blooming plants.

To this end, attached is a graph of appropriate groundcovers, perennials, shrubs, ornamental grasses and short trees for the circumstances. These plants would all require a period establishment but they would not require deadheading. The perennials would require an annual spring clean-up of last year's flowering or grass stems after the first week of spring 50 degree weather.

Please also let me know if you would like to move forward with a layout/design.

Thank you for this opportunity to be part of creating a wonderful space that adds to the ecological health of our community and also provides a variety of aesthetic pleasure throughout the year.

07-06-20 PLANT STAKING/MODIFICATIONS:

Well Hello Again,

It was such fun setting stakes with you the other day. In answer to our plant questions:

<u>Shasta Daisy</u>, <u>Leucanthemum superbum</u> The Shasta daisy is what most people consider to be the poster child for the perfect daisy — pure white she-loves-me-she-loves-me-not petals radiating from a sunny yellow center. While it may seem foolish to try to improve upon such perfection, there's nothing wrong with having a bit of variety.

'Jack Frost' Bugloss, Brunnera macrophylla 'Jack Frost' - "This is a choice collector's plant, but an easy-to-grow perennial that performs well in all but the driest of shady conditions. Excellent for the woodland garden. 'Jack Frost' handles more direct sun that most other variegated types of Brunnera, though in hot-summer regions some afternoon shade is recommended to prevent leaf scorch."

Black Cohosh, Cicimifula simplex/Actaea racemosa, commonly called Black Cohosh, is an upright, Missouri native perennial which occurs in rocky woods in the Ozark region of the State.

Revised Plant List

To Move:

- 1 bright pink Dianthus to stair area,
- 1 Dianthus further away Dianthus to be closer to the rest.
- (Potential), small, Blue Hosta to the back area.
- The Forsythia shrub after root pruning. I would trim back the straggling branches to half
 of their length as well so that next spring a flush of multiple, shorter branches will
 emerge.

To Purchase & Add to Existing Plants: 1 Shasta Daisy, 1 Pow Wow Purple Coneflower. You said you'd rather go to Maple Hill but just to let you know, these are at Agway as of Sunday and could be planted right now with excellent watering because of the easy access being so close to the top of the slope. 5, Pasture or Carolina Roses (yellow flags along road shoulder).

To Purchase and Plant This Fall:

- 7, White Coneflower, Echinacea 'White Swan' or 'Pow Wow White' (Blue flags/0
- 7, Perennial Cranesbill Geranium, per your color preference (white flags)
- 8, Black Eyed Susan (yellow flags)

The flags are the map. Let's make a key:

Yellow flags along the street are the Pasture/Carolina Rose shrubs (5)

Blue above those shrubs are the White Coneflower (7)

Red Flags are the Moss Phlox

Single Yellow flag is the relocated Forsythia

Yellow flags along the rock wall are the Black-eyed Susan (8)

White flags are the perennial Geranium (7)

Watering

We spoke of a soaker hose and timer at the top of the hill being critical for new plant survival not only now but into the future for the fall installation given our regions continuing reduced rainfall. Here are two products that are reasonably priced and work well for me.:

• The <u>Element, 3/8" Soaker Hose with EZ connect pieces</u> (image above) is made of recycled tires and the fittings were super easy to attach or modify. Be sure to get the newer version that has the separate couplings. The older crimped, metal couplings leak and fail.

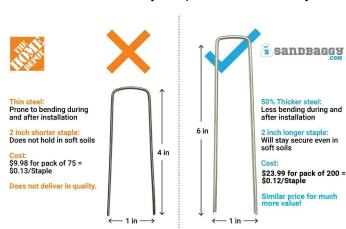

• Water Timer - After many years of waking up in the middle of the night realizing that I had left the hose on, I strongly recommend a timer. I have tried many different kinds, settling on the mechanical version which does not depend on faliable batteries. The Orbit Mechanical Water Timer is inexpensive and mechanical, not depending on batteries. I have provided the link to the original companies but they are out of stock at the moment. They may be able to be found at the dreaded HomeDepot. Given the drought, I would suggest ordering ahead.

WATERING NOTES:

- Please consider covering this hose with shredded bark mulch (one three cubic foot bag should do fine) so that the fine mist does not immediately evaporate into our very hot air.
- Setting the timer for an hour, first thing in the morning and just before bed allows for maximum absorption by the plants.
- I use metal stakes to secure the hose in the exact locations where needed. For your straight run at the top of the hill with mulch on top

these may not be necessary. In the future they may. I have them available for purchase at 25 cents apiece.
